

## **Finnish student healthcare renew their healthcare IT: e-health solutions from Medixine LTD**

The Finnish student healthcare organization, YTHS, has renewed their healthcare IT with a unique and comprehensive solution that combines EMR, dental care software and e-health solutions into a well-integrated set.

The main supplier of the service is Acute FDS Ltd. Acute has a web-based EMR system that is easy to use and flexible compared to previous generation systems. Medixine provides tools for all YTHS's e-health needs with a Medixine Clinic –based patient portal.

"Acute is focused on EMRs and therefore we were looking for a partner to provide an e-health solution. Medixine's experience and knowledge as well as the Medixine Clinic-product convinced us and led to co-operation. Together, Acute and Medixine are able to provide a comprehensive solution, one that is unique in the market and also serves our customers well", says Acute CEO Ilari Laaksonen.

"The challenge in many e-health projects is that integrating e-services to EMRs is difficult or even impossible. YTHSs system is now designed as an open environment, enabling collecting and sharing information according to customer needs, without any commercial restrictions. Students are an ideal target group for new service processes, in which patients' e-tools play an important role", says Ilkka Toivola, the CEO of Medixine Ltd

E-services for students will at first include for example viewing a user's own medical record, safe messaging with health care providers, anamnesis questionnaires with other necessary forms and a possibility to use certain third party services, for example mobile applications.

"Acute's and Medixine's solution was the most cost-efficient and best qualified of all the solutions in the tendering process. It also fulfilled best the functional requirements that we set for the solution beforehand. We are constantly improving our operations, and expect the flexible IT-solution to bring us new, significant possibilities", says Kimmo Kääriä, development manager for YTHS.

The project starts in May 2014 and the solution is expected to be in production in the year 2015.

### **About Medixine**

Medixine Ltd is a Finnish privately held limited company based in Espoo. Medixine has been concentrating on software for cloud services in healthcare since 2001 and launched its core product Medixine Clinic to the international market in 2013. Medixine works outside of Finland through distributors, its network currently covers Sweden, Norway, Denmark, the UK, US and Australia.

Medixine's mission is to help secure healthcare services in the coming decades through bringing the power of modern disruptive technology into the traditionally conservative health care industry. Medixine helps its customers to implement big and inevitable changes in well planned steps.

Medixine's vision is to empower citizens to become active players concerning their own and their family's health and wellness. This change will lead to tremendous savings and improvement in citizens' health and well-being.
