

Breakthrough for Finnish health technology: Linde to use Medixine's Remote Monitoring Solution

Do you think your grand parents could actively take part in a digital health care program? Medixine's comprehensive Medixine Suite system makes it possible. Taking a measurement and sending it to a cloud service requires just one push of a button, related reminders and notifications can even be delivered using automatic phone calls.

Medixine's flexible and holistic approach to connected care services is crucially important when scaling remote monitoring to large patient populations, from teenagers to senior citizens.

Linde, a leading industrial gases and engineering company, has been looking for this kind of configurable system for its home care services. The system would cater for all components of remote monitoring: devices, connectivity, cloud software and services.

Linde and Medixine have now signed a co-operation agreement. First deliveries are expected already this Spring.

"Remote monitoring is the most demanding segment in connected care. Its usefulness is widely recognized, but it has been very slow to scale into significant numbers of patients. We are very proud about this partnership with Linde and excited about the potential to scale Medixine's innovative connected care services to larger patient populations and wider geographical areas." Says Dr. Tapio Jokinen, CEO of Medixine Oy.

"Medixine with its solid track record is one of the pioneers in connected care. Linde operates on the global market and faces a multitude of needs in remote monitoring. The unique configurability of Medixine's system is of great value to us." Says Martin Braecklein, Linde's business manager for telehealth.

About Medixine

Medixine Ltd is specialized in connected care solutions. Originally a Finnish company, it operates in all Scandinavian countries and the EU. Medixine's core product Medixine Suite is the result of over 15 years of research and development. It offers tools for new, more effective care where patients' active participation in the prevention and care processes and efficient communication between all parties in the care community is essential.
